# Introduction to Kemedar

- The pioneering super app in proptech: seamless user experience.
- 35 diverse countries, Kemedar addresses users in their preferred language.

Kemedar stands at the forefront of the proptech revolution, integrating multiple services into a

 Multinational operations: With a presence in varying property market needs while engaging

 Extensive property listings: Offering millions of property listings, we leverage data to provide users with tailored property search experiences.

# The Need for a Robust Workflow

- teams, requiring a well-defined workflow to keep progress in sync.
- crucial for maintaining quality and consistency.
- scalable, allowing features to expand without compromise.

 Navigating complexity: Managing a global platform involves simultaneous coordination across various

• Enhancing collaboration: A robust workflow fosters communication and cooperation among developers,

• Upholding quality assurance: As we scale, assurance processes must evolve, ensuring all deployments meet high standards through consistent testing and review.

• Ensuring future scalability: To accommodate increasing user demands, our workflow must be adaptable and

# Dev Stage

- Emphasizing lightweight development: The cycles.
- refinements and adjustments.
- Incorporating a local database: This allows developers to work offline and test their code without impacting live systems, enhancing productivity.
- reside before broader testing.

## development environment is designed to minimize complexity, facilitating faster coding and testing

• Utilizing example data: Example data can help developers test features quickly, allowing for quick

• Git Branch: dev: The development branch acts as a foundation where all new features and fixes initially  scripts > src ▶ test types .babelrc.js .editorconfig .eslintignore .eslintrc.js flowconfig .gitignore BACKERS.md

packages

Receipt: disatures, lands weisers, analisis depresentation, and statement managements v2.6.0-beta.2 build: release 2.6.0-beta.2 build: build 2.6.0-beta.2 feat: dynamic directive arguments for v-on, v-bind and custom dimension origin/dynamic-directive-arguments) feat: dynamic args for custom perf: improve scoped slots change detection accuracy (#9371) test: test cases for v-on/v-bind dynamic arguments refactor: v-bind dynamic arguments use bind helper test: fix tests, resolve helper conflict fix: fix middle modifier feat: handle dynamic argument for v-bind.sync vigin/slot-optimization perf: improve scoped slots change feat: dynamic directive arguments for v-bind and v-on refactor: extend dom-props update skip to more all the second fix: fix checkbox event edge case in Firefor test: fix tests in IE/Edge ALE A REAL REPORT OF THE REAL PROPERTY OF THE REAL PROPERTY OF

# Three-Stage Development Workflow

**Development Stage** This initial phase focuses on lightweight coding practices to foster rapid iterations and flexibility.

**Pre-Live Stage** During this phase, we conduct rigorous testing with live data to ensure functionality and performance under actual operating conditions.

#### Live Stage In this final phase, we deploy our application to production, making it accessible to end-users while managing live database operations.

# Pre-Live Stage

### **Testing with live data** Real data is integrated into the testing environment, helping to validate performance and stability effectively.

### Utilizing latest scripts from dev branch Incorporating the most recent features and fixes ensures that tests are relevant and up-to-date.

### **Connecting to a live database copy** This allows testing scenarios that closely mimic realworld interactions without impacting actual operations.

### Git Branch: pre-live Here, we consolidate all changes from the development phase, preparing for the transition to the live environment.

# Live Stage

- **Deployment to production:** At this point, tested unlocking new functionalities and improvements.
- safeguarding the quality and stability of the live application.
- world data and interactions, maintaining user engagement.
- users experience firsthand.

features are launched and made available to users,

• Syncing code from pre-live branch: This crucial step ensures that only verified code reaches the end-users,

• Managing the live database: Operational oversight ensures that changes in the application align with real-

• Git Branch: main/live: The main/live branch contains the stable version of the application, reflecting what

# Git Workflow

#### **Establishing key branches** The workflow utilizes three branches: 'dev' for development, 'pre-live' for testing, and 'main/live' for production, facilitating organized progress.

#### **Pull Requests for collaboration** This process allows developers to propose changes, fostering communication and collective review before integrating code into the live environment.

Files that are not part of the scripts can be excluded from version control, streamlining the repository and reducing clutter.

## Managing gitignore configurations

# Benefits of This Workflow

- updates and features.
- reaching the end-users.
- easily incorporate new features and increase capacity as user demands evolve.
- Achieving cost-effectiveness: By minimizing resources are allocated efficiently, ultimately lowering costs.

 Maximizing efficiency: Streamlined processes reduce redundancy, enabling rapid deployment of

• Ensuring reliability: Consistent testing and pre-live verification substantially lower the risk of bugs

• Facilitating scalability: Adaptable workflows can

downtime and maximizing developer productivity,

# Implementation Plan

# **Providing team training**

Educating team members on workflow procedures promotes adherence and maximizes the benefits of the new system.

#### Setting up Git repositories Creating organized and accessible repositories lays the groundwork for effective version control and collaboration.

## **Configuring development environments** Standardized settings across teams ensure that developers work in consistent environments, reducing friction in the workflow.

Monitoring and optimizing workflow Regular assessments provide insights for continued improvement, ensuring the workflow remains efficient and effective over time.

# Call to Action

#### Join us in shaping the future of Proptech Be a part of Kemedar's journey as

Be a part of Kemedar's journey as we revolutionize how real estate operates in the digital age.

#### Support for exponential growth Our innovative approach requires enthusiastic support and collaboration from all stakeholders as we continue to evolve our offerings.

# Revolutionizing the proptech industry

Together, we can lead the charge, implementing groundbreaking solutions that redefine property technology.
